OIL AND GAS RENEWABLES / CLEANTECH UTILITIES ENERGY EFFICIENCY POLICYWATCH WHITE PAPERS COMMENTARY CAREERS

## Production Control Services and OleumTech Partner on Tech Solutions

May 6th, 2010

Print Email Larger Smaller Share

"In the face of growing environmental and safety issues, today's oil and gas producers are tasked with finding cost-effective ways to manage risk. Additionally, as drilling moves to harsher and more remote locations, the need for remote well control and data acquisition continues to increase," explains Andrew Boldt, Vice President of Sales for PCS

Reported by Staff

Frederick - Production Control Services (PCS) and OleumTech today announced that they have partnered to offer the oil and gas market digital oilfield automation and wireless SCADA solutions. The companies' combined offering provides operators a single source for automated well control, field data acquisition and wireless tank level monitoring.

OleumTech and PCS have already completed and deployed a successful joint automation project for a large oil and gas producer in the DJ Basin.

"By combining our respective strengths in well control, information gathering and delivery, and wireless telemetry,

OleumTech and PCS are uniquely positioned to better serve our customers," says Vrej Isa, Chief Operating Officer at OleumTech. "Moreover, PCS' sales and service locations in the major oil and gas plays will accelerate delivery of intelligent automation solutions."

The two equipment manufacturers will leverage their market-specific expertise, ranging from field control systems to remote sensors, to offer operators a broader range of well monitoring capabilities. Under the partnership, the PCS 4000 Controller®, which serves as the master controller in the PCS Well Automation/SCADA system, will incorporate wireless sensor data from OleumTech's WIO® transmitters.

### About Production Control Services

Since 1985, Production Control Services Inc. (PCS) has focused solely on production optimization. Its products and services include the PCS Plunger Lift System™, Opti-Flow Gas Lift System™, Nitrogen Generation and SCADA/Well Automation. The company employs local production optimization experts in more than two dozen locations in the U.S. and Alberta, Canada. For more information, visit [www.pcslift.com](http://www.pcslift.com).

### About OleumTech

OleumTech is a leading manufacturer of industrial automation systems that represents the new paradigm of remote monitoring and control. The patented WIO® System eliminates costs associated with running cables and digging trenches with the use of its wireless tank monitoring, wellhead monitoring and peer-to-peer oilfield automation solutions. Forming the foundation of a highly scalable, peer-to-peer wireless infrastructure, the WIO® System enables "last mile" connectivity in any wireless SCADA and telemetry application. For more information, visit [www.oleumtech.com](http://www.oleumtech.com).
