Nitro2Go™ Nitrogen Generation by PCS Delivers Quick and Cost-effective Well Unloading and Liquid Recovery

Frederick, CO, September 1, 2010 – Nitro2Go™ Nitrogen Generation by [Production Control Services](#) (PCS) is being utilized by oil and gas producers throughout the major U.S. shale plays to rapidly recover frac fluids, kick-off well production and unload existing wells.

[Nitro2Go Nitrogen Generation](#) by PCS offers a fleet of mobile units that produce nitrogen gas (N₂) at the well site. The units utilize state-of-the-art membrane technology to separate air into rich, inert nitrogen gas and oxygen waste. The N₂ is injected into the well by a high-pressure booster compressor, while the oxygen is released harmlessly into the atmosphere.

Nitro2Go units are able to discharge nitrogen gas at volumes up to 600 scfm (standard cubic feet per minute) at 5,000 psi (pound-force per square inch). The entire process is contained to a single semi-trailer that is easily movable from one location to another. PCS provides highly trained two-man crews, who continuously supervise the Nitro2Go operations on location, monitoring flow rates and providing twice daily reports on hourly flow back rates, pressure readings and liquid recovery volumes. Operations occur 24 hours per day, seven days per week where allowed.

When compared to swabbing, another common recovery method, Nitro2Go can deliver up to ten times as much liquid per day and can operate around the clock to remove liquids continuously until the well is flowing on its own. Nitro2Go has successfully started or resumed the production of hundreds of wells and often takes days or even weeks off the recovery process compared to other methods.

About Production Control Services

Since 1985, Production Control Services Inc. (PCS) has focused solely on production optimization. Its products and services include the [PCS Plunger Lift System™](#), [Opti-Flow Gas Lift System™](#), [Nitro2Go™ Nitrogen Generation](#) and [SCADA/Well Automation](#). The company employs local production optimization experts in more than two dozen locations in the U.S. and Alberta, Canada. For more information, visit www.pcslift.com.
